

CertiKit GDPR Toolkit

Version 5

Completion Instructions

Thanks for purchasing the GDPR Toolkit from CertiKit. The toolkit is designed to represent a comprehensive and integrated set of documentation which meets many of the requirements of the European Union General Data Protection Regulation (GDPR).

The documents have been created in the 2010 version of Microsoft Office and must be edited using either 2010 or a later version. If you have a later version, there is nothing to stop you saving them in that format and making use of the additional features which that version provides.

In order to get the best out of the template documents you need to understand a few straightforward conventions that are used within them.

1. Read and then remove the cover page and implementation guidance pages

These pages are included to provide specific information about the document and to meet our legal and contractual obligations. Once you have read this part of the document, feel free to remove it from your final version.

2. Replace the CertiKit logo

You will need to remove the CertiKit logo on the front page of each document and replace it with the logo of your organisation.

3. Replace the generic terms

The main generic term used in the toolkit is *Organization Name*. This is held in a custom field called *Organization Name* within each individual document and the value of this field is initially set to [Organization Name].

To change this field within a document:

1. Update the document property to reflect your organisation name.

To do this (Word 2010):

- a) Click on: *File > Info > Properties > Advanced Properties* (see Figure 1 below)
- b) Click the *Custom* tab and select the *Organization Name* field from the Properties box (see Figure 2)
- c) Change the value *[Organization Name]* to your own (shown as “Your Company” in the example) and click the Modify button (see Figure 3)
- d) Click the OK button

Toolkit Completion Instructions

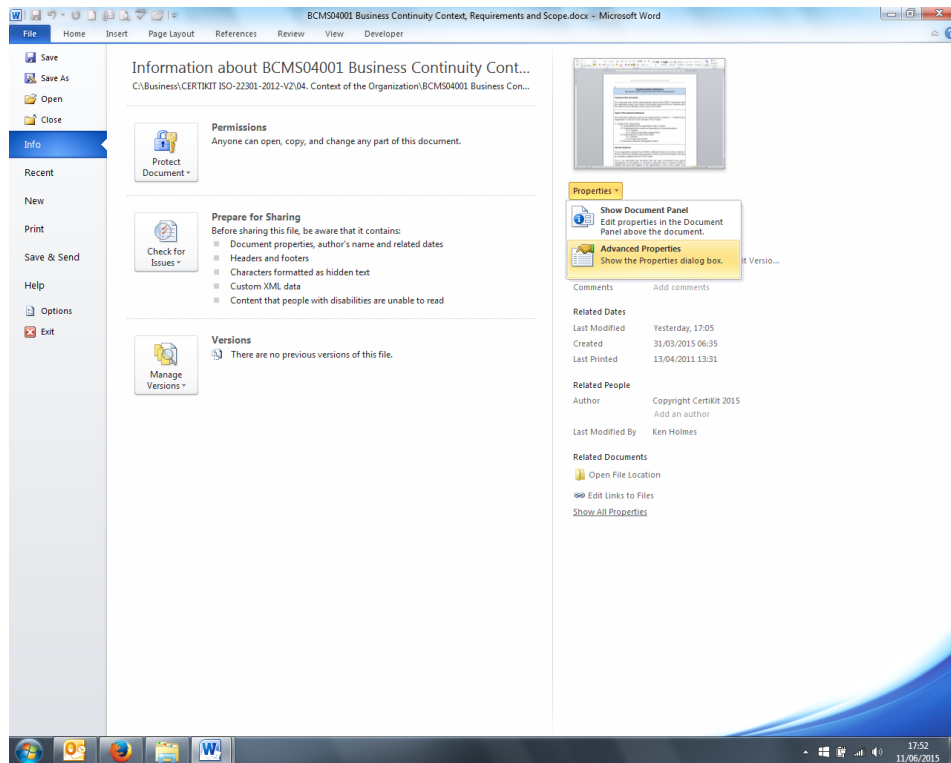

Figure 1 – Navigating to Advanced Properties

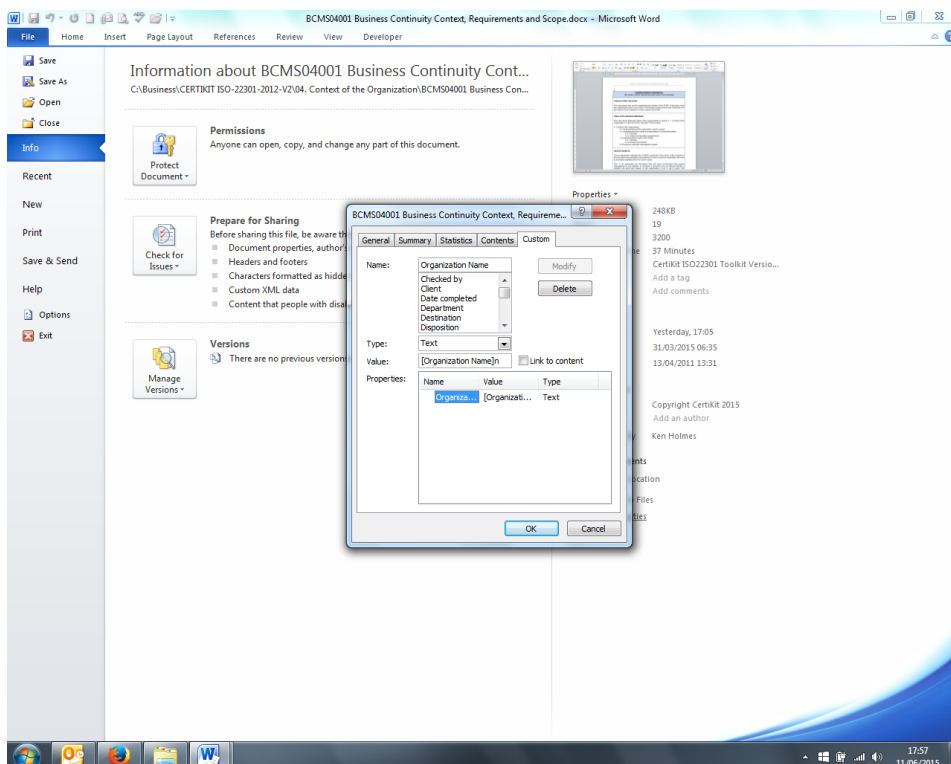

Figure 2 – Selecting the Organization Name field

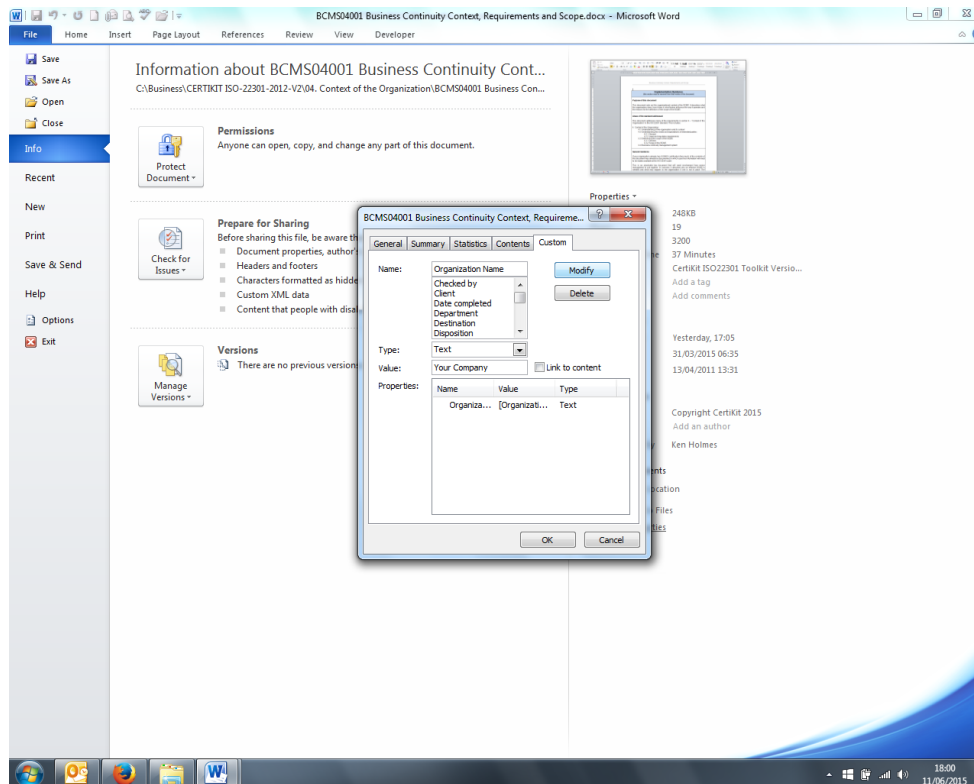

Figure 3 – Changing the value to “Your Company”

Then:

2. Press Ctrl a on the keyboard (i.e. hold down the “Ctrl” key and press the “a” key at the same time) to select everything in the document. If using a Mac, this is Command a.
3. Press the F9 key on the keyboard to update all fields in the document. If using a Mac, right-click (if enabled) or Control-click, and select Update Field
4. In many documents you will need to OK 1, 2 or 3 messages to update table of contents, tables and figures.

Your own organisation name will now be shown in all places in the document

Additional fields are used in some documents where appropriate, such as *Controller Name* and *Processor Name*. These can be updated in the same way as for *Organization Name*.

If you wish to permanently convert the fields in a document to text i.e. so that they are no longer updateable, then you will need to click into each occurrence of the field and press *Ctrl Shift F9*.

If you would like to make all fields in the document visible then go to *File > Options > Advanced > Show document content > Field shading* and set this to “Always”. This can be useful to check that you have updated all fields correctly.

There are a few places in some documents where additional role names or other entities are used and these are highlighted for manual replacement in each document.

4. Replace the Example Text

Anything highlighted may need to be replaced. In many cases example text has been used to illustrate the kind of entry that should go in that location within the document. This is specific information about your business operation or organisation that cannot be standardised. Tables give an indication of the format and type of information needed in some places and these should be used where possible, replacing the contents with your own.

5. Tailor the CertiKit GDPR Awareness Posters

Some of our toolkits come bundled with posters, and some of these have editable form fields, allowing you to add your own text. In the case of the GDPR Toolkit V5, these can be found in the bottom right-hand corner of both posters.

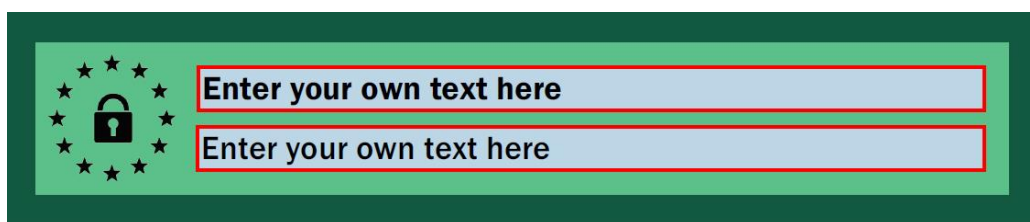

The first (green) poster is aimed at your data subjects and the second (blue) at your employees. So if we take the example of a dentist's surgery, you might want to pin the first poster in the waiting area and the second in the staff room.

What you do with the editable space is up to you, but here are a couple of examples:

- Data subject poster: Curious about the personal data we hold about you?
Ask us for a copy of our GDPR policy.
- Employee poster: Have you spotted a potential GDPR data breach?
Report it to your line manager immediately.

Editing the form fields is simple. It is possible to do so using certain browsers (particularly Microsoft Edge), but for full functionality we would recommend downloading the latest version of Adobe Acrobat Reader from here: <https://get.adobe.com/uk/reader>

Once you have installed the software, save a copy of one of the posters somewhere handy, such as your desktop. Then open it in Adobe Acrobat Reader.

Remove the “Enter your own text here” entries and type in your own message. Then save the poster, replacing the existing PDF.

The first line of text is in bold, and the second regular body text. Be careful not to write beyond the edge of the text box.

The poster will now include your own message and can be printed out for the noticeboard.

6. Make it Your Own

As you address each area of the regulation you will need to review the contents of each document in detail to make sure it's relevant to you. If you want to change any aspects – go ahead. Just check first in the guidance notes at the start of the document and in the regulation itself to make sure you don't remove anything that is explicitly required.

7. Updates to the Toolkit

CertiKit will periodically issue updates to the toolkit. These will contain revised versions of certain documents and possibly new additions to the set. Sometimes we also drop documents if our customers tell us they are not sufficiently relevant. Updates are based upon any changes made by the publishers, feedback from our customers, technology changes and on our own on-going experience as consultants. For a period of 12 months after purchase updates will be provided to you as part of your license so please ensure that the email address you have given us remains current.

8. Obtaining Support

We offer email support for any queries about the document templates for 12 months after purchase. Queries should be sent to the email address support@certikit.com. We will endeavour to respond to your query within 3 working days (UK calendar and business hours).

9. Feedback

We love to receive feedback about our products as this helps to make them even better so if you don't have a specific query but would just like to let us know what you think please email us at feedback@certikit.com.

That's it – Good luck!

The CertiKit Team
